# R&M

## R&M Company Profile

### Specialization in: Different Fields

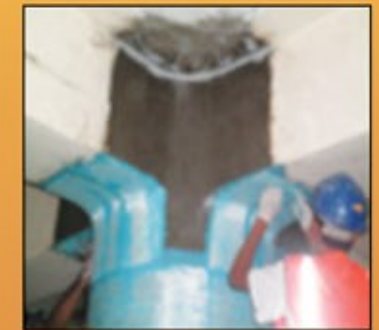

#### Pre-Stressing

#### Non Pre-stressing

#### Fiber Wrapping

#### Profile

We provide engineering solutions for strengthening and repair of existing Structures and takeover turnkey strengthening jobs.

- We perform detailed Finite Element (FE) and Conventional Analysis as per National and International Standards.
- We have expertise in Seismic Analysis by codal methods, response spectrum methods and Non-linear static pushover analysis as per ATC 40 and FEMA guidelines.
- We perform complete design of strengthening using FRP composites as per ACI (ACI110R), Euro Code (Ec8), CEB – FIP (Bulletin14) and Japanese (JBDPA) guidelines.
- R&M International is a complete infrastructure, manufacturers of material for the Strengthening and repair of existing structures offers system solutions for the post - Re-reinforcement of constructional elements made of steel –reinforced concrete and of Bituminous pavements. Additionally, reinforcement system to control soil erosion, for rock Support and for dam construction are offered. S&P's Engineering department provides Assistance in the optimum selection from the comprehensive S&P product range. The S&P Reinforcement systems are manufactured from fibre rovings made of different materials such as carbon, glass, aramide and polyester.S&P's own static design software is available to Engineers as well as to planning and design offices. The S&P Reinforcement systems are Exclusively applied by specialized applicators trained by S&P who guarantee a high quality application of the systems.
